PROFESSIONAL SUMMARY

BSc Data Science student (graduating May 2026) with hands-on experience building end-to-end analysis pipelines across telecom, retail, finance, and social research domains. Skilled in Python, SQL, Pandas, and data visualization; capable of translating 100K+ record datasets into clear, actionable business intelligence. Completed real-world simulations with Deloitte and multiple Kaggle-certified tracks. Strong communicator of data insights through polished reports and dashboards.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Julia (beginner)

Libraries & Analysis: Pandas, NumPy, Matplotlib, Seaborn, Data Wrangling, EDA

Tools: Git/GitHub, Google Colab

Domains: Customer Analytics, Survival Analysis, Social & Mental Health Data, Retail Analytics, HR / Job Market Analysis

EDUCATION

Kavayitri Bahinabai Chaudhari North Maharashtra University, Jalgaon Sep 2023 – May 2026 (Expected)

Bachelor of Science in Data Science

Relevant Coursework: Machine Learning, Statistical Analysis, Database Management, Data Structures, Algorithms, Differential Equations, Calculus of Several Variables

R.C. Patel Junior College, Shirpur

Completed 2022

Higher Secondary Certificate (XII)

PROJECTS & EXPERIENCE

Telecom Customer Churn Analysis

2025

Python · Pandas · Seaborn

- Analyzed churn across 7,000+ customer records, identifying an overall churn rate of 26.5% with month-to-month contract holders churning at 42.5% vs. just 3.2% for two-year contracts.
- Segmented churn by tenure, payment method, and service bundles; found 40%+ churn in the 0-2 month cohort and 44% churn for electronic-check payers.
- Produced a strategic recommendations report covering onboarding campaigns, senior-citizen outreach, and AutoPay incentives projected to reduce churn by up to 30+ percentage points.

Superstore Business Performance Analysis

2025

Python · Pandas · Matplotlib

- Explored 9,994 retail transaction records spanning multiple years, segmenting \$2.2M+ in revenue by shipping mode, customer type, and geography.
- Identified furniture as a loss-making category (Tables: -\$17,725 despite \$206K in sales) and Technology as the top profit driver (\$145K+), enabling prioritized product-mix recommendations.
- Mapped geographic concentration risk—California alone accounts for 37% of top-market sales—and proposed regional diversification strategies.

Student Depression Analysis

2025

Python · Pandas · Seaborn · Matplotlib

- Processed 27,901 records across 18 demographic, academic, lifestyle, and mental-health features to surface key depression risk factors.
- Found that financial stress, poor sleep (<5 hrs), high academic pressure (levels 3-5), and unhealthy diet are the strongest correlates of depression among 18-34-year-olds.
- Visualized results through heatmaps, bar charts, and age-trend line plots; delivered actionable insights for early intervention targeting.

AI Impact on Jobs by 2030

2025

Python · Pandas · NumPy · Seaborn

- Analyzed 3,000 job records including salary, AI Exposure Index, Automation Probability, and skill profiles to categorize roles into low/medium/high automation risk bands.
- Challenged the assumption that high-paying jobs are automation-safe; identified future-proof roles including Doctor, Research Scientist, AI Engineer, Nurse, and Teacher based on skill indicators.
- Demonstrated that skills matter more than education credentials alone in predicting automation resilience.

Titanic Survival Analysis

2024

Python · Pandas · Seaborn

- Processed 891 passenger records with thoughtful imputation strategies (median fare, mean age, cabin marked Unknown) to produce a clean analytical dataset.
- Identified that gender, ticket class, family size, and fare paid were the strongest predictors of survival; female, higher-class passengers with fewer dependents had the best outcomes.

IPL Auction 2023 – Insightful Summary

2024

Data Analysis · Excel / Python

- Summarized auction dynamics across teams, player categories, and bid patterns to surface spend efficiency and value picks.

Data Visualization Tool & AI Plant Recognition App

2024

Python · React · Vibe Coding

- Built a no-code CSV visualization tool that auto-renders charts and graphs, removing the coding barrier for non-technical stakeholders.
- Designed an AI-powered plant recognition app providing species name, habitat, toxicity level, and care instructions from a single scan.

CERTIFICATIONS & TRAINING

- Data Analytics Job Simulation – Deloitte (Forage)
- Intro to Machine Learning – Kaggle
- Pandas – Kaggle
- Python Programming Certification – MKCL (Maharashtra Knowledge Corporation Limited)
- Information Technology Fundamentals – MKCL

KEY ACHIEVEMENTS

- Delivered 5+ end-to-end data analysis projects spanning telecom, retail, social research, and HR analytics domains.
- Built data pipelines processing 100K+ records, identifying inconsistencies and improving data quality before analysis.
- Completed real-world Deloitte data analytics simulation; demonstrated ability to operate in professional consulting workflows.
- Participated in an AI-based poster-making competition using generative AI tools.
- Completed multiple real-world Python & Pandas projects on DataWars platform.
